

WANTED: BP FOR CLIMATE CRIMES

The burning of more fossil fuels every year is causing dangerous global temperature increase.

Extreme fires, floods, droughts, storms and heatwaves are already being experienced worldwide.

Sea-level rise is causing disruption and will lead to mass migration, widespread suffering and loss of life.

A far worse future is in store for our children.

Oil companies have known about the risks for decades but have hidden the truth from us in order to carry on making vast profits.

Countries must shut down fossil fuel production and ration consumption.

The UN Secretary-General says we have 18 months to make the changes necessary to avoid a catastrophic future.

Only about 3% of BP's operating capital is spent on renewable energy.

We demand BP to find a business model that doesn't harm us, or else close down.

The bottom line is a liveable future

Extinction Rebellion is a worldwide movement demanding urgent action on ecological breakdown. Join us.
